

# Array

Designer	Snøhetta
Year	2024-2026

Array Outdoor brings the system's modularity and design features outdoors, furnishing terraces, gardens and lounge areas with versatility for residential, contract and public settings. Straight and curved modules, together with poufs, can be freely combined to create fluid, convivial configurations, adapting to a wide range of design requirements and uses. The fabric upholstery, available in a broad colour palette, fully envelops each module, defining soft, continuous volumes for a natural dialogue with the surrounding environment.

## Frame

The structure is made from an injection moulded base in recycled polypropylene. The process leaves a hollow cavity in the centre in order to use as little material as possible.

The seat and backrest are moulded from 51% recycled polyurethane foam, and designed to maximise comfort. The hidden fastening system is made of glass-filled recycled polypropylene.

Materials are specifically developed for outdoor use: the polyurethane is covered with Dacron bonded to a fabric treated with a water-repellent finish, while the elimination of top stitching reduces the risk of water infiltration. The cushions maintain generous, welcoming comfort while ensuring high performance in outdoor settings.

## Protective covers on request

Made-to-measure protective covers are available on request.

## Cover

Outdoor fabric, removable cover.

## Array finishes

### Cover

**E** Ramiro

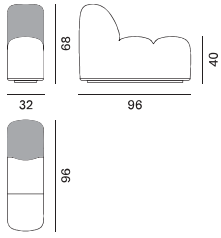

**F** Delta
